车铣复合  
高精度  
高速度  
多配置

## 01 产品概况 Product Overview

BHR700V卧式车铣复合加工中心是宝鸡机床集团有限公司采用先进研发手段开发的新产品，机床采用卧式对列双主轴布局，上刀塔为回转B轴，下刀塔为卧式动力刀塔型结构，机床采用高速车、铣电主轴，滚柱线轨导轨副，车铣链式刀库，机床具有5轴联动、车铣复合、高速高精度等特点。

设备用于对复杂轴类等零件的精密车、铣复合加工，广泛应用于航空航天、船舶、汽车、模具等制造业，特别适合航空、能源、油气、挤出机螺杆、塑料机械、曲轴及通用加工领域，为用户提供客户化的加工方案。

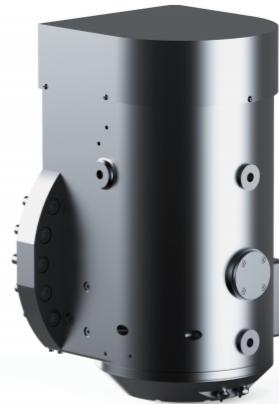

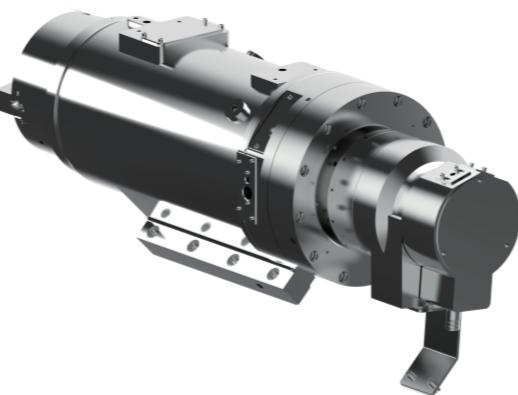

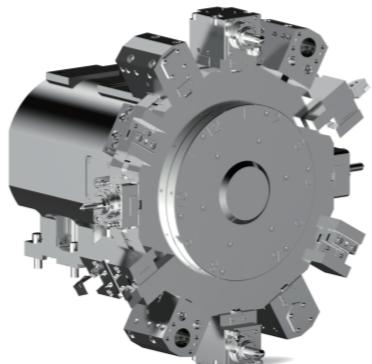

BHR700V horizontal turning and milling composite machining center is a new product developed by Baoji Machine Tool Group Co., Ltd. using advanced research and development methods. The machine tool adopts a horizontal dual spindle layout, with the upper turret being a rotating B-axis and the lower turret being a horizontal power turret structure. It adopts high-speed turning and milling motor spindles, roller linear guideway, turning and milling shared chain type tool magazine, with features such as synchronized 5 axes, turning and milling composite, high speed and precision.

BHR700V is used for precision turning and milling composite processing of complex shafts and other parts, widely used in manufacturing industries such as aerospace, shipbuilding, automobiles, molds, etc. It is particularly suitable for aviation, energy, oil and gas, extruder screws, plastic machinery, crankshafts, and general processing fields, can provide customized processing solutions for customers.

## 02 性能优势

### Performance advantages

- XYZBC五轴联动，车铣复合结构，左右主轴及上下刀塔组合，可实现同步、复合加工，一次装夹精密切削复杂零件，最大化提高生产率；
- 平床身、立柱结构，通过结构优化设计，保证整机高刚性；
- 采用正交设计结构，最大化Y轴加工范围；
- B轴采用滚子凸轮+伺服电机驱动，刚性高、精度保持性好；
- 铣主轴采用内置电机驱动结构，最高转速12000r/min；
- 高精度主轴轴承，最高转速达4000r/min，高精度C轴驱动、制动结构，可以高速、高精车削；
- 直线轴采用高刚性滚柱重负荷精密级直线导轨，高精度预拉伸滚珠丝杠传动，回转轴采用转台轴承，五轴全闭环检测系统，精度保持性高。保证加工运动的高速、高精度、高刚性和高稳定性；
- 内置链式排屑器，带铁屑箱；铣主轴冷却液中心出水；
- 车铣共用40刀位链式刀库，结合12工位BMT65下刀架，提供充足的刀具安装能力；
- 铣主轴、车主轴内置电机、滚珠丝杠采用强制冷却系统；
- 导轨、滚珠丝杠副采用集中自动稀油润滑，各个节点配有定量式分油器，定时定量向各润滑部位注油。铣主轴采用油气润滑。润滑系统可靠，提高了各运动副的使用寿命；
- 机床采用全封闭防护设计；可拖动旋转式操作面板、手持盒MPG使操作更加方便；
- 采用高档数控系统，机床具有坐标转换功能（数控系统功能），使编程更加简单；
- 关键零件和出厂精度均由美国布朗·夏普BROWN & SHARPE三坐标测量和英国雷尼绍RENISHAW双频激光干涉仪严格检测，对其进行全面检验，确保机床几何精度和工作精度。

- XYZBC synchronized 5 axes, turn-milling composite structure, combination of left and right spindles, upper and lower turrets, can achieve synchronous and composite processing, precision cutting of complex parts in one time clamping, maximizing productivity;
- The flat bed and column structure are optimized through structural design to ensure high rigidity of the entire machine;
- Adopting an orthogonal design structure to maximize the Y-axis machining travel;
- The B-axis is driven by a roller cam and servo motor, with high rigidity and good accuracy retention;
- The milling spindle is driven by built-in motor with a maximum speed of 12000 r/min;
- High precision spindle bearing with a maximum speed of 4000r/min, high-precision C-axis drive and braking structure, capable of high-speed and high-precision turning;
- The linear axis adopts high rigidity roller heavy load precision linear guideways, high-precision pre-stretched ball screw transmission, and the rotary axis adopts rotary table bearings. The five axes with full closed-loop detection system has high accuracy retention. Ensure high-speed, high-precision, high rigidity, and high stability of machining motion.
- Built in chain type chip conveyor with chip cart; coolant center outlet system in milling spindle;
- Turning and milling shared 40 position chain type tool magazine, plus a lower 12 position BMT65 turret, providing sufficient tool installation capacity;
- The milling spindle and turning spindle are equipped with built-in motors and ball screws using a forced cooling system;
- Guideways and ball screws adopt centralized automatic thin oil lubrication, and each node is equipped with a quantitative oil separator, which regularly and quantitatively injects oil to each lubrication part. The milling spindle is lubricated with oil and air. The lubrication system is reliable, which improves the service life of moving parts.
- The machine tool with fully enclosed protection ; rotary operation panel and portable MPG make operation more convenient;
- Adopting a high-end CNC system, the machine tool has coordinate conversion function (CNC system function), making programming easier;
- The key parts and factory inspection accuracy are strictly tested by the BROWN&SHARPE coordinate measurement and theRenishaw dual frequency laser interferometer, and comprehensively inspected to ensure the geometric and working accuracy of the machine tool.

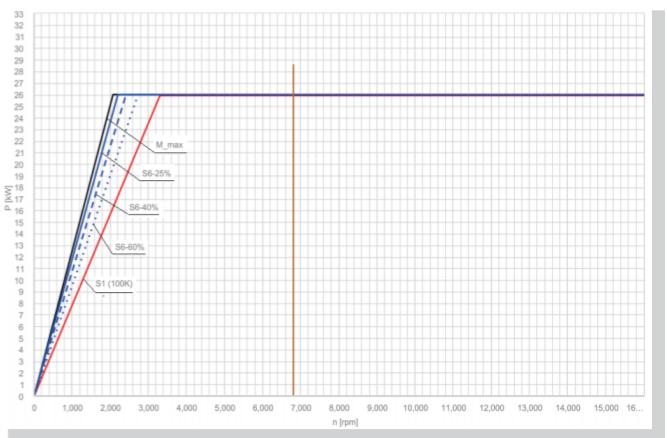

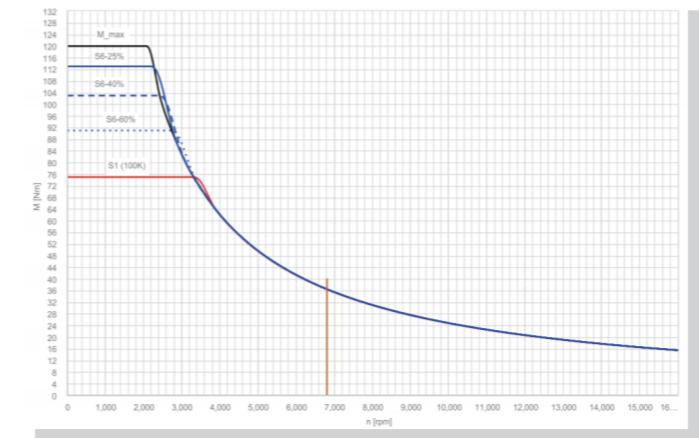

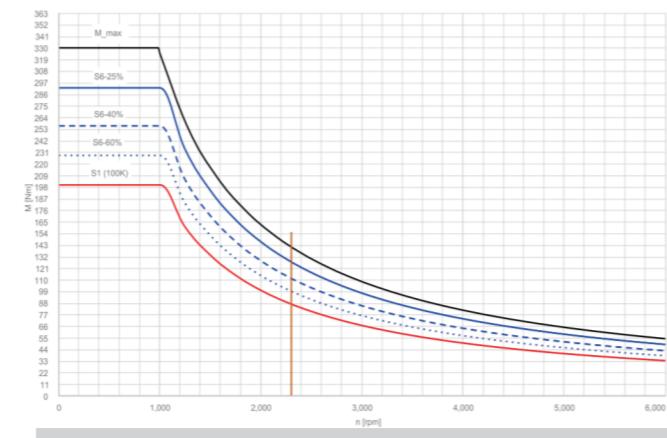

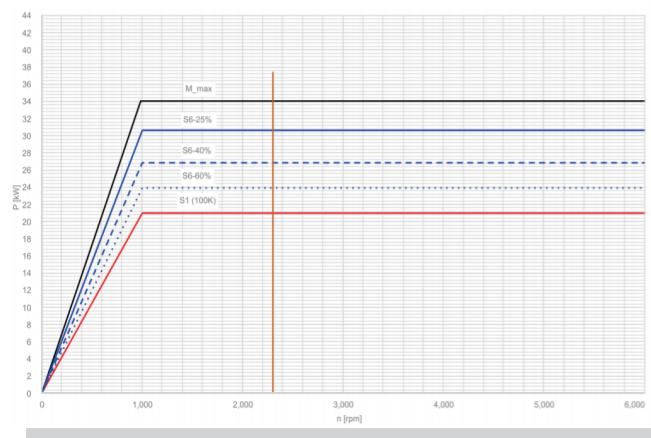

项目 (Item)	单位 (Unit)	标准规格(尾座及中心架) (Standard specification (with tailstock and steady rest))	副主轴规格(带下刀架) (sub-spindle specification (with lower turret))
加工 Capacity	床身上的回转直径 (Diameter swing over bed)	mm	Φ700
